Senior Full Stack Web Developer

Description
Senior Full Stack Web Developer for full time employment.

Intergo Telecom is company involved in the development, marketing and operation of telecommunications platforms and services (SaaS and CPaas). We are a niche and competitive player in our field and we are looking for a senior full stack developer to join our team.

If you are a self driven and passionate individual, with a thirst to learn and work with a team that is building and shipping new exciting products constantly then join us. We take up the challenge to build simple or complex applications then work hard to bring them to market and scale them and challenge big incumbents. If you like the idea of working in a hybrid work environment with a mixed remote / on premises flexible team that competes globally, constantly growing and challenging itself then this is for you. You can work from your own own space or from our HQ office in Paphos, Cyprus.

As a hybrid/remote team we use Slack for communication, GIT for code, AWS for hosting, Asana for task organizing. We give opportunities for continual growth and improvement and even though we work remotely we meet some times in random places in the world.
You have the option to work from our offices in Paphos, or flexible/remote too.
Want to be part of a growing team, that loves building great long term projects, help us grow and achieve great things together?

Send your CV to hr@intergo.com.cy

Thank you for your time and interest! Looking forward to hearing from you

Responsibilities
Responsibilities:

As a member of our growing team you will be wearing many hats and be involved in all stages of the development and maintenance of our projects. Your key daily tasks will include:

- Develop backend applications with PHP (Laravel/Lumen), MySQL
- Help produce new and improve existing products.
- Monitor and clear bugs as they appear to make sure of good operation of our products
- Manage/guide a small team of developers
- Participate in planning and executing the roadmap with the PM and the CEO.

Education:

- Bachelor's degree in Computer Science or equivalent or more than 5 years professional PHP development experience
